FOR MORE INFO : COMMERCIALE@JDATA.IT

INTRODUCTION

JInventory software, designed to manage inventory activities, is an excellent tool for verification and control of purchasing data.

It can be used in any setting, from a small warehouse to a shopping mall, even with several dozen operators engaged in counting activities.

- Inventory management via Web and Mobile modules
- Counting, monitoring, delivery of results, and reporting
- Gestione stampe delle *performance* operative e andamento delle letture
- Generation and export of the result file to the company ERP management system
- Possibilità di effettuare inventari multipli in modalità *online* oppure *offline*

Jinventory
